

Safety For Your Fingers

Fingersaver 
Safety For Your Fingers

The Fingersaver is designed to prevent finger injuries by keeping hands away from the impact position of the hammer on flogging spanners and from pinch points when using impact wrenches and hydraulic torque equipment

Every day, in many industries, people are sustaining hand and finger injuries that are preventable. Using the correct safety device should be an essential part of every day life.

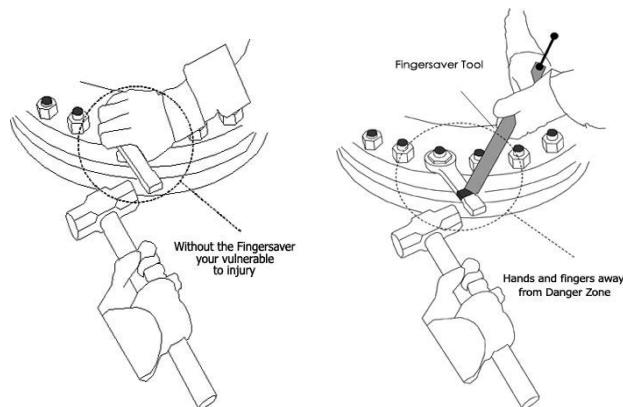

The Fingersaver has a proven track record in preventing injuries to fingers during flange joint assembly by keeping hands away from the danger area.
